

As a driver for Schneider National that drives a dedicated lane through Chicago, Il every day I am on the road I depend on satellite radio, XM, to provide me with a traffic report. They do a much better job than the local stations because they are always updating. Also, there is no waiting 5, 10 or 15 minutes for the next report. I depend on XM for traffic reports. I do not want the US Government to limit XM's ability to provide this service. XM is a great service and the US Government should not mess with them. Please leave them alone and let them provide the great service they are providing to the truckers who need their traffic, weather, and other program services. Thank you. Tom Weber, Sheboygan, Wi 53083
